

I am Saidov Bobur Rashidovich studied at Urgench State University, majoring in Information Technology. I am very interested in IT. I also graduated from college with a degree in Information Systems and Technology. To date, I have gained a great deal of knowledge and skills in IT. I have had a number of successes in IT. I am currently studying offline and online at two universities, Urgench State University in Uzbekistan and Adam Mickiewicz University in Poland.

To date, the Kazakhstan state has achieved a lot in the field of IT in the CIS. It is also one of the leading countries in the field of education. There are many facilities for students to study in Kazakhstan. Many qualified professors, candidates of sciences, and other foreign teachers teach students in higher education institutions. He has made remarkable achievements in the field of education. Zhetysu University cooperates with many foreign universities. This allows for more knowledge and experience sharing. I want to continue my career in IT again after I get my master's degree. In addition to teaching university students, I would like to share my knowledge with non-organized youth interested in the field of IT. I want to create a club of free young programmers and raise their IT potential to a higher level. Today, IT plays a very big role in our lives. We know that in all developed countries, IT is very developed and occupies a special place. My plan to further improve the quality of distance learning. In foreign countries, this system is very common, and many problems would have been prevented if we had further improved and implemented the distance learning system. Many people want to get an education, but this is not possible due to the lack of necessary buildings. If we make full use of the distance learning system, anyone who intends to study can use this distance learning system at home. This will help more people get higher education

I also want to study for a PhD and Doctorate to further develop my knowledge and skills in the future. My goal is to become a leading expert in the field of IT and I plan to benefit as many people as possible.

I hope that my knowledge and achievements can meet your expectations. Thank you for reviewing my application.
